

## 【TECO Inductive Meal-Delivery System Granted National Invention Award】

### 感應式送餐系統

TECO's self-developed service-oriented robot has been in operation at MOS Burger outlets throughout Taiwan. It features multi-platform expandability, map navigation and barrier avoidance, inductive positioning, voice control, and AI management, making it applicable in various occasions. It boasts multiple patented technologies, such as inductive meal-delivery system, which has been granted, among near 600 entries, silver award of the National Invention Award and will be displayed, along with other award-winning works, in the excellent invention pavilion of Taiwan Innotech Expo next year.
